Installation via Package Repository

Lars Kiesow (ELAN e.V.)

Dec 12, 2018

Type	Lightning Talk (15min)
Target Audience	Beginners

This lightning talk will show how installing Opencast from the official package repository works and how you can get a working Opencast set-up in just a few minutes.

This sessions is targeted toward potentially new Opencast adopters with no prior knowledge about the installation process of Opencast. It will focus on one way to archive this goal (RPM packages on CentOS) and will not get into details about distributed or even custom set-ups.
